MIXING INSTRUCTIONS FOR THE KINGSTON TRIO

MONITOR MIX: Please ring out the system with equalizer prior to sound check. Roll off 150 to 250 Hz dramatically and take a dip at 1K. Other potential problem frequencies for us are 6K, 6.3K and 8K. Try not to dip these too much as we do need the presence they give.

HOUSE MIX: Set comfortable volume levels and “natural” tone settings for the condenser mic. Blend the bass into the mix to taste. Once levels are set and the mix seems well balanced – usually by the end of the first or second song – we request no further adjustments be made unless there is an obvious problem or feedback issue. Please don’t try to reach for vocals or instruments that are off mic – we prefer to move in and out of the mic, mixing ourselves (for better or worse). Please do not use any effects such as digital delay or chorus. Reverb (to taste) is appreciated, but should be dropped during spoken portions of the show.

LIGHTING: Full front wash covering the entire stage area. Additional Stage lighting and back lighting to taste. We have no specific lighting cues, but we do request no abrupt changes during songs, no flashing “disco” lighting or strobes and no green spotlights.
